Plateflow Heat Exchangers Offer Efficient Heat Transfer And Compact Design

*Buffalo, New York.....*Plateflow plate and frame heat exchangers yield heat transfer coefficients three to five times greater than other types of exchangers. Combined with true counter current flow, Plateflow heat exchangers require one third to one fifth the surface area of conventional shell and tube exchangers.

The compact, Plateflow designs are an attractive alternative to shell and tube exchangers for many applications. Plateflows are also available in Free Flow designs for clog-resistance performance as well as Double-Wall and Semi-Welded plate design for contamination protection and aggressive fluids. The units can be specified in 35 different models with connections up to 20 inch diameter.

ITT Standard is a division of ITT Corporation which is a leading global diversified provider of engineering and manufacturing. ITT Standard was the first U.S. manufacturer of heat exchangers to obtain ISO 9000 certification and has been an industry provider for over 75 years.
